## PROFILE

Full-stack software developer with experience delivering web and mobile applications from requirements and research through design, implementation, testing, release and maintenance. My work also includes team coordination, training, code review, customer support and translating user needs into practical solutions. I value precision, continuous learning, customer satisfaction and improving both the product and the way a team delivers it.

## WHAT I BRING

### End-to-end delivery

Taking work from requirements and research through implementation, testing, release and support.

### Broad technical range

Working across web, mobile, APIs, data, state management, infrastructure and third-party services.

### Team contribution

Coordinating delivery, reviewing work, training colleagues and communicating with customers and stakeholders.

## PROFESSIONAL EXPERIENCE

### Ziya Afrika

Feb 2025 — Present

#### Web & Mobile Developer

- Build React Native journeys for member groups, wallets, deposits, transfers, agent withdrawals, loans and repayments.
- Develop React administration workflows with server-driven pagination, multiple filters, status controls and debounced search.
- Integrate Go APIs using Redux Toolkit and RTK Query, and collaborate with backend engineers to clarify financial records, actors and business rules.
- Built an administration activity tracker that translates last-access data into clear operational health categories.
- Prepare end-to-end stakeholder demonstrations and document product, integration and application-security concerns.

### Panache Technohub Limited

Oct 2024 — Feb 2025

#### System Developer

- Led day-to-day engineering work within the development team, coordinated tasks, followed up delivery and supported implementation decisions.
- Worked across a broad set of web and mobile product features rather than a single administration interface.
- Built React and Next.js interfaces with TypeScript, API integration and application-state management.
- Reviewed work, tested product journeys and trained team members on project workflows, tools and implementation practices.
- Contributed to requirements clarification, UI/UX decisions, research, verification and stakeholder-facing delivery.

### Adzec Software and Tech

Jan 2024 — Aug 2024

#### Full-Stack Web Developer

- Delivered customer websites from requirements collection and technical research through implementation and ongoing maintenance.
- Translated customer details and changing requirements into scoped development tasks and product updates.
- Worked across code implementation, maintenance, content creation, code review and project coordination.

### Innovia Kenya

2023 — 2024

#### Full-Stack Web Developer

- Worked on a multi-vendor e-commerce platform spanning customer, vendor and administration experiences.
- Developed and maintained full-stack product features while supporting requirements gathering and ongoing platform improvements.
- Investigated issues across the purchasing and vendor workflows, delivered fixes and supported users after implementation.
- Contributed to code maintenance, review and coordination as the product evolved.

SELECTED PRODUCT

LifeFast

Founder, Product Designer & Full-Stack Mobile Engineer

Independently designed, developed and launched a fasting and wellness application combining fasting sessions, hydration, progress history, educational content and community participation.

- Built the React Native and Expo application with Redux Toolkit and RTK Query.
- Developed the Node.js and Express API with PostgreSQL and supporting administration tools.
- Deployed to DigitalOcean behind Nginx, configured domains and SSL, and managed the production database.
- Integrated authentication, password-reset email, notifications, advertising and in-app purchase experiments.
- Migrated data from CockroachDB to PostgreSQL and replaced blocked SMTP infrastructure with transactional email.
- Managed EAS builds, closed testing, Google Play compliance and the production release.

EDUCATION

Multimedia University of Kenya

Bachelor of Business Information Technology

September 2019 — October 2023

TECHNICAL SKILLS

Mobile

React Native, Expo, Expo Router, EAS Build, Android, iOS

Web

React, Next.js, TypeScript, JavaScript, Tailwind CSS and Ant Design

Backend & APIs

Node.js, Express, Python, Django, REST API development and Go API integration

Data & State

PostgreSQL, MongoDB, Firebase, Redux Toolkit and RTK Query

Firebase & Reliability

Crashlytics, Remote Config, ticketing workflows and production issue follow-up

Delivery & Version Control

DigitalOcean, Ubuntu, Nginx, SSL, Git, GitHub, Google Play and EAS

LANGUAGES

English
